

Exploring Waste Processing Technologies

You are Invited to a Panel Discussion of Waste Processing Technologies

Friday, June 26, 2009 at 9:00 a.m. to Noon
Registration, Coffee and Rolls at 8:45 a.m. to 9:00 a.m.
Thompson Park Center – Dakota Lodge
(Address and Directions on Reverse Side)

*Hosted by the Minnesota Resource Recovery Association
in collaboration with the Solid Waste Management Coordinating Board*

For more than twenty years, ten of Minnesota's waste-to-energy facilities have successfully preserved the land, increased the recycling rate and reduced greenhouse gases while converting municipal solid waste into electricity or process steam for industries and district heating and cooling systems.

The *Wall Street Journal* recently identified Minnesota as one of the top three states in the nation with waste-to-energy facilities. These facilities are operating with state of the art pollution control equipment.

Please join the Minnesota Resource Recovery Association and the Solid Waste Management Coordinating Board on Friday, June 26, 2009 from 9:00 a.m. to noon, to learn more about why Europe is building 200 new waste-to-energy facilities and what other processing technologies are being developed for waste processing, including anaerobic digestion, gasification and engineered solid fuel.

Please RSVP by Monday, June 22, 2009, to:
Jessica Gunderson, Richardson, Richter & Associates, Inc.
